Data Visualization with Power BI and Tableau

Practical – V

Roll No.: T025	Name: Afsha Amjad Mujawar
Class: TYIT	Batch: 1
Date of Assignment: 21/08/2026	Date/Time of Submission: 21/08/2026

Part A – Program

Analyzing Data using Table Calculations in Tableau

Dataset: zomato.csv

a) Apply Quick Table Calculations

Running Total and Percent of Total

Steps:

1. Open the dataset in Tableau and create a worksheet.
2. Add the required measure to the view.
3. Right-click the measure → Quick Table Calculation.
4. Select Running Total or Percent of Total.
5. Check the result.

Task : Create a Percent of Total across Categories**b) Create Moving Averages and Cumulative Metrics****Task : Create a Moving Average Calculation****Steps:**

1. Add the required measure to the worksheet.
2. Right-click the measure.
3. Select Quick Table Calculation.
4. Choose Moving Average or a cumulative calculation.
5. Adjust the time period/window if required.

**Task : Create a Custom Cumulative Metric via Calculated Field**

c) Perform Year-over-Year Growth Analysis

Task: Calculate Year-over-Year (YoY) / Period-over-Period Percent Growth

Steps:

1. Add Date and the required measure to the worksheet.
2. Right-click the measure.
3. Select Quick Table Calculation → Year over Year Growth.
4. Compare the current year with the previous year.

d) Use Ranking Functions – Top N / Bottom N

Task : Create a Rank Calculation

Steps:

1. Select the required dimension and measure.
2. Sort the values according to the measure.
3. Apply a Top N or Bottom N filter.
4. View the selected records.

Task : Build the Top N / Bottom N Ranked View

Pages

Columns
SUM(Votes)

Rows
Name
Restaurant Rank

Filters
Restaurant Rank

Top & Bottom Restaurants

Name
Restaurant ..

WINDOW_SUM and WINDOW_AVG

1. Create a calculated field.
2. Use `WINDOW_SUM()` or `WINDOW_AVG()`.
3. Add the calculated field to the worksheet.
4. Check the result across the selected table window.

[illegible]

1. Open the Table Calculation settings.
2. Select the fields across which the calculation should run.
3. Select the fields that should restart the calculation.
4. Apply the settings and check the result.

g) Create Dynamic Titles and Labels

Steps:

1. Create a calculated field or table calculation.
2. Add the required value to the worksheet.
3. Use it in the Title/Label where applicable.
4. Format the title or label properly.
