Data Visualization with Power BI and Tableau

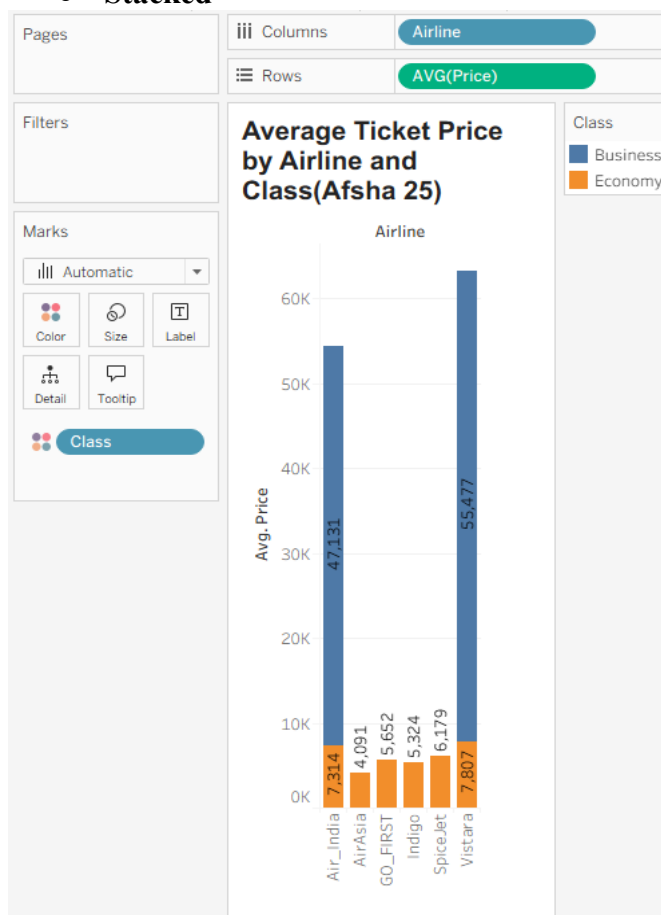

Practical – III

Roll No.: T025	Name: Afsha Amjad Mujawar
Class: TYIT	Batch:1
Date of Assignment:14-08-2026	Date/Time of Submission:14-08-2026

Aim: Creating Advanced Visualizations in Tableau

a) Create stacked and grouped bar charts for comparison

- Stacked**

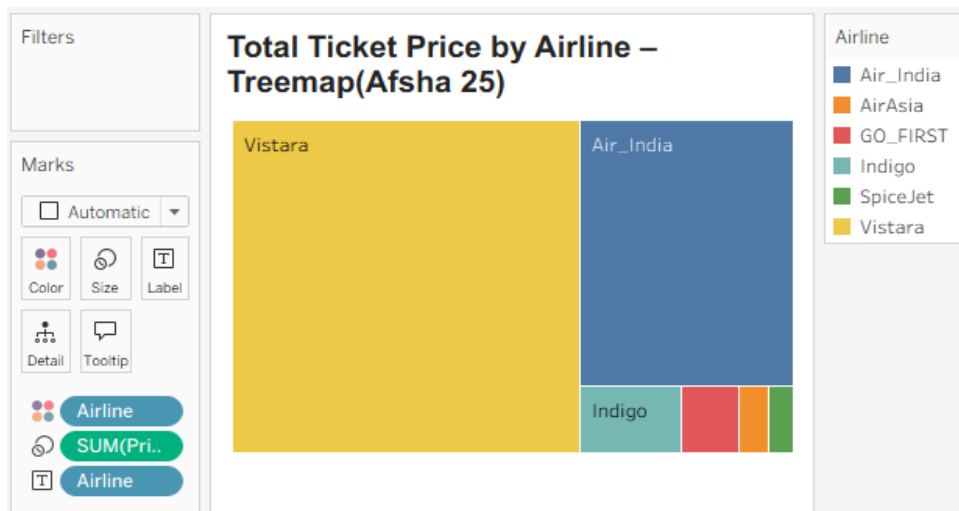

- Grouped bar**

Insight: This chart helps compare the average ticket prices of different airlines and see how prices differ between classes.

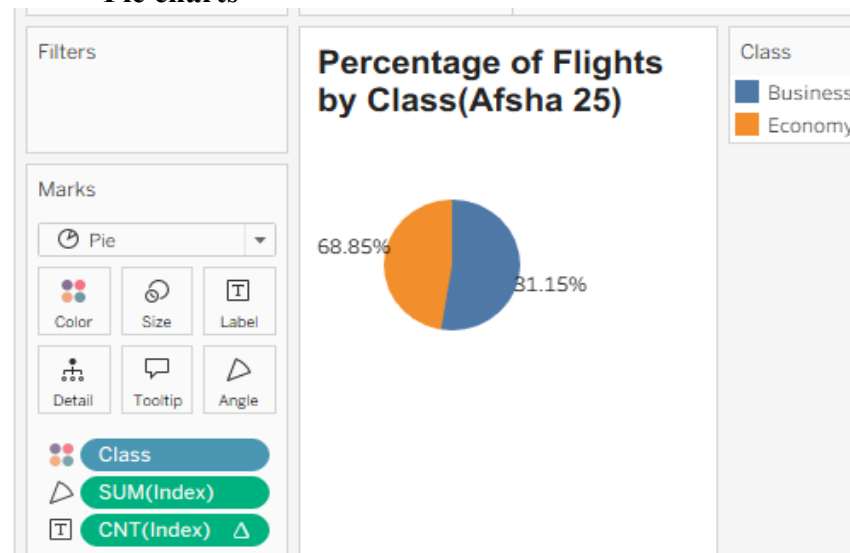

b) Build tree maps and pie charts for part-to-whole analysis

- Tree maps**

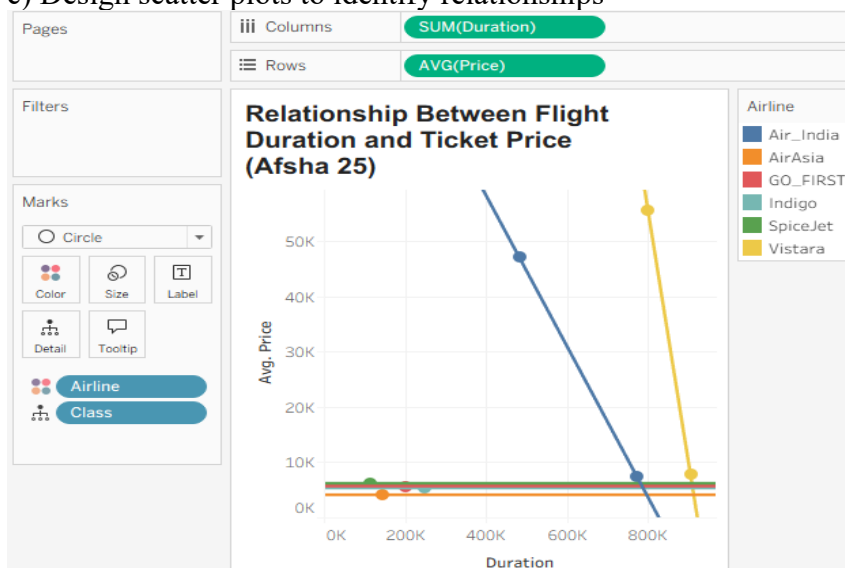

Insight: Larger rectangles represent airlines with a larger total ticket-price value.

- **Pie charts**

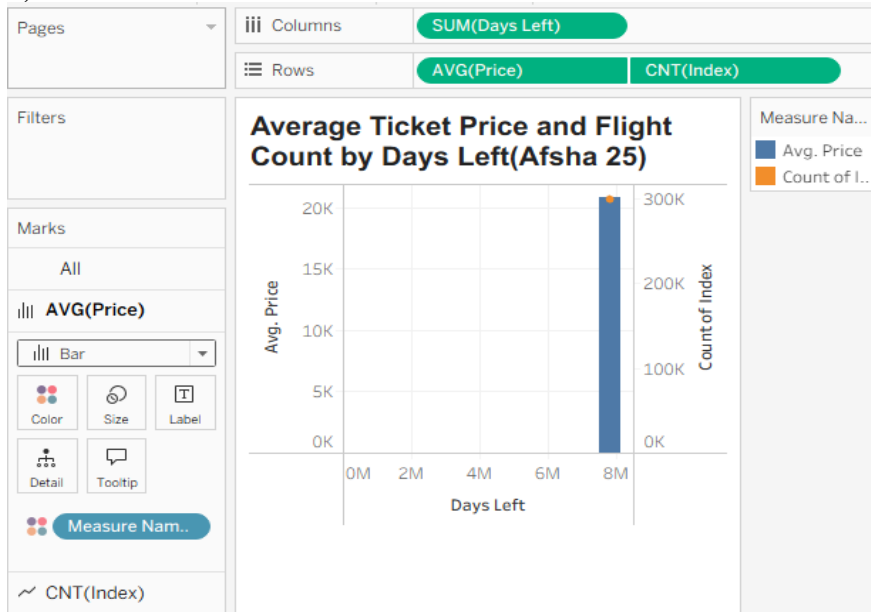

Insight: The pie chart shows what percentage of the dataset belongs to each travel class

c) Design scatter plots to identify relationships

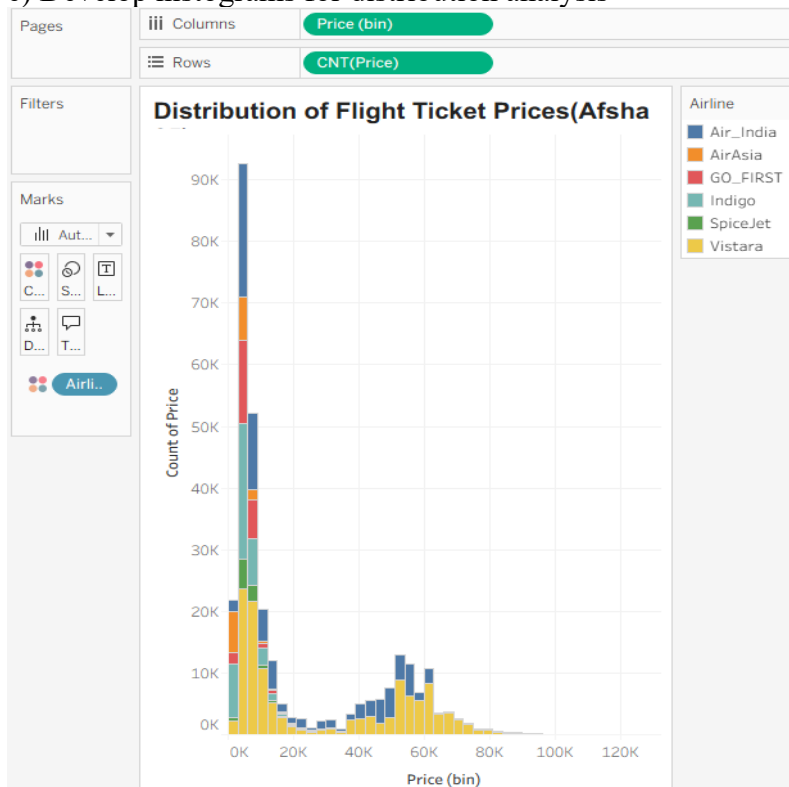

Insight: The scatter plot helps determine whether longer flights tend to have higher ticket prices.

d) Create dual-axis and combination charts

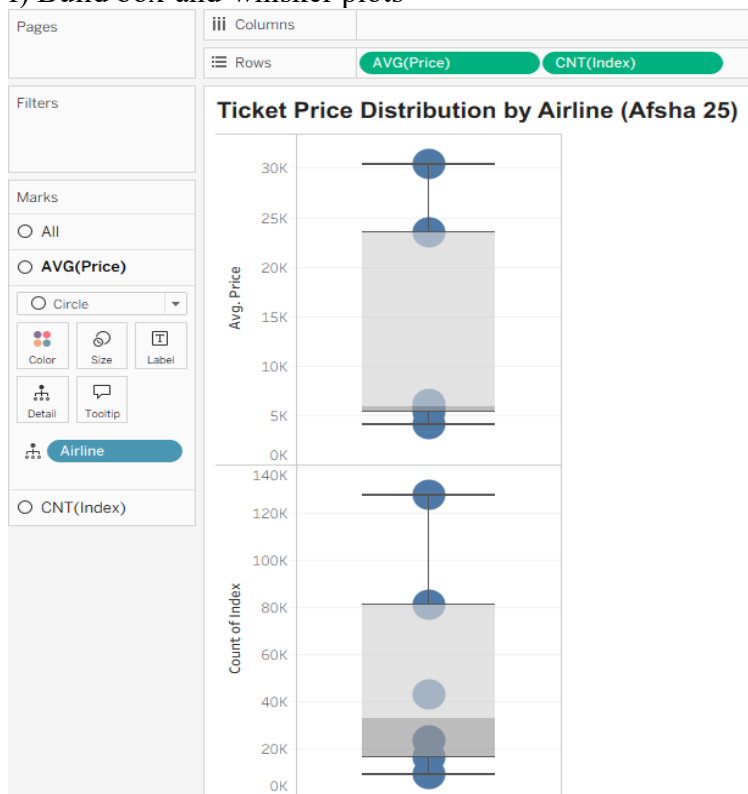

Insight: This can show whether ticket prices change as the departure date approaches.

e) Develop histograms for distribution analysis

Insight: The histogram shows the price ranges in which most flights are concentrated.

f) Build box-and-whisker plots

Insight: The box plot allows you to identify which airlines have higher price variation and whether there are unusually expensive or inexpensive flights.

g) Use Gantt charts and advanced date visualizations
