Data Visualization with Power BI and Tableau

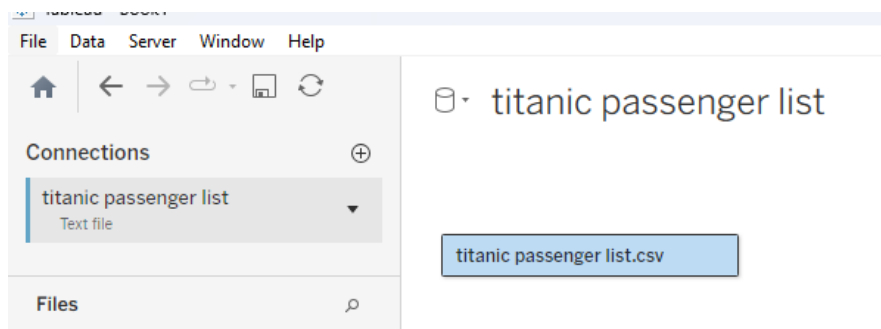

Practical – II

Roll No.: T025	Name: Afsha Amjad Mujawar
Class: TYIT	Batch:1
Date of Assignment: 31-07-2026	Date/Time of Submission: 31-07-2026

Working with Data Sources and Data Preparation in Tableau

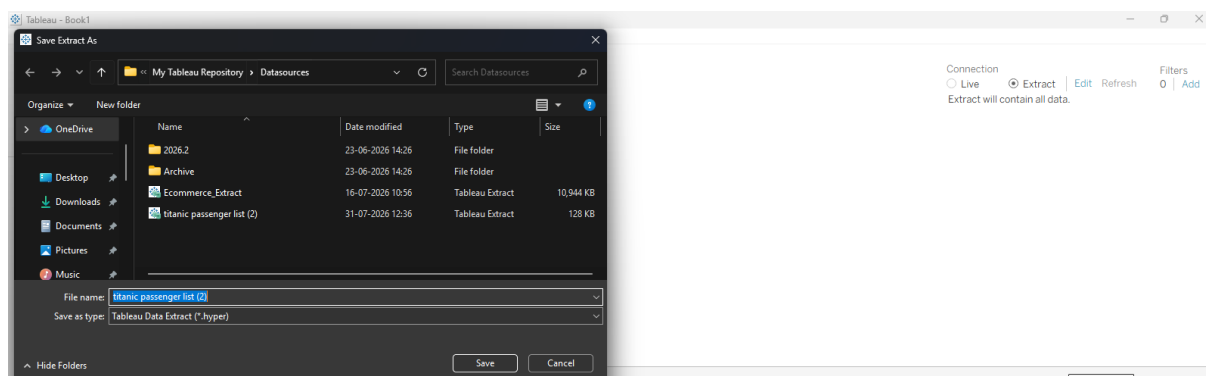

a) Connect to different data sources (Excel, CSV, Database)

- Open Tableau Desktop.
- Click **Connect** and select Excel, CSV, or Database.
- Choose the dataset and click **Open**.
- Verify that the data is loaded correctly.

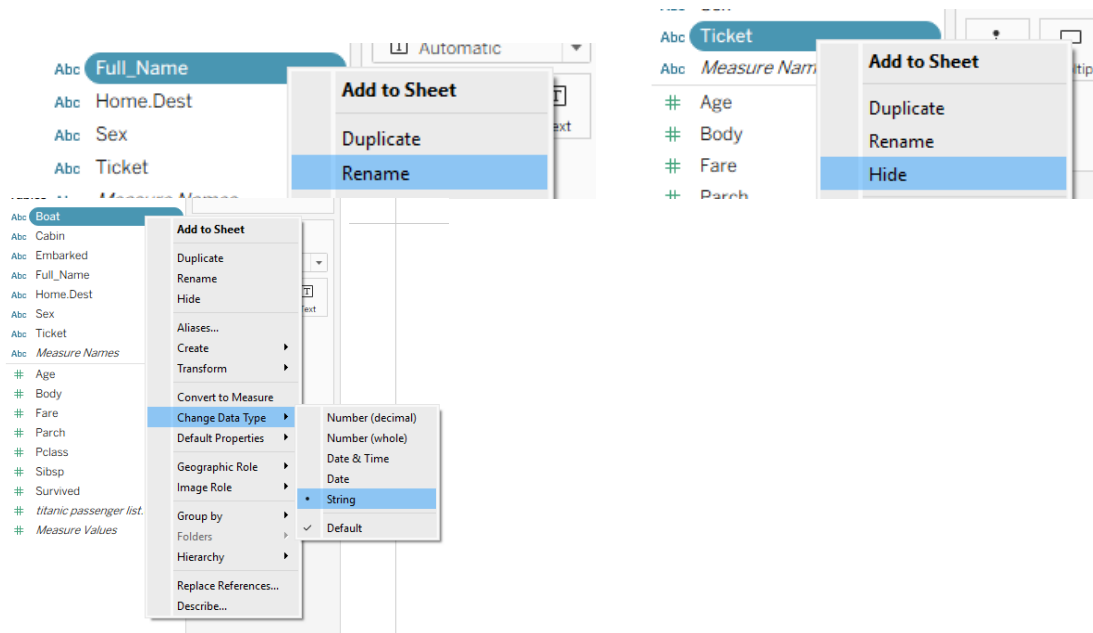

b) Create and use data extracts vs live connections

- Open the **Data Source** page.
- Select either **Live** or **Extract**.
- Save the extract if required.
- Open a worksheet to continue.

c) Manage metadata (rename, hide, change data types)

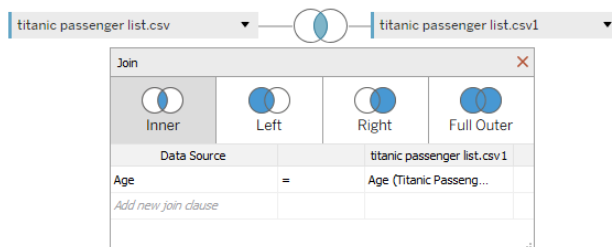

- Open the **Data Source** tab.
- Rename fields if needed.
- Hide unnecessary fields.
- Change the data type of fields where required.

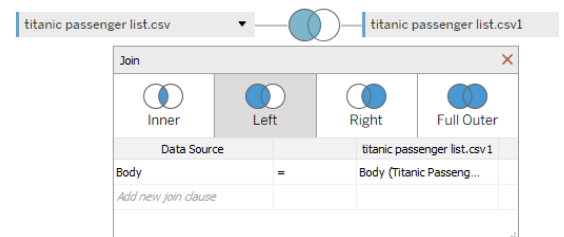

d) Perform joins (inner, left, right) on multiple tables

- Add a second table.
- Select the common field.
- Choose the join type (Inner, Left, or Right).
- Check the joined data.

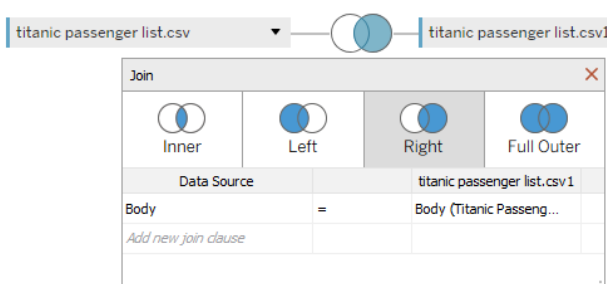

titanic passenger list.csv is made of 2 tables. ⓘ

titanic passenger list.csv is made of 2 tables. ⓘ

e) Apply data blending between two sources

- Connect a second data source.
- Select the common field.
- Tableau blends the data automatically.
- Verify the blended results.

f) Implement different types of filters (dimension, measure, date)

- Drag a field to the **Filters** shelf.
- Apply Dimension, Measure, or Date filters.
- Select the required values.
- View the filtered data.

g) Optimize performance using extracts and filtering

- Use **Data Extract** instead of Live when possible.
- Hide unused fields.
- Apply necessary filters only.
- Save the workbook.
